Coding Conventions:
1. Constants are all uppercase with underscores as spaces: CONSTANT_VAR

2. Global Variables start with my: myVariable

3. Parameters start with the: theVariables

4. include implementation comments

5. Include javadoc comments on every constant, global variable, class, or method

6. Include your name in the javadoc comment if you worked on it

Class to Review:
- MainGUI (view-package)
    - ProjectListPanel (Inner-Class)
    - AboutPanel (Inner-Class)
    - LoginPanel (Inner-Class)

Code to Review:
You can review the setup() method and the functionality of the inner classes that are called through it. The setup() method populates the user info panel at the top of the frame, then on button press "removes" it and replaces it with the project search and create panel, as well as the about button. The rest of the GUI interactions are diversified out of the MainGui so as to not make it too large, so please stay in the MainGUI class.

User Stories Covered:
We have implemented a way for the user to enter and maintain their name and email, as well as being able to create a project and inquire about the application's developers, the version and who the owner is. All of our user stories are included in the deliverable 1 document on page 4. The user stories that are part of our official requirements are 12, 2 + 8, 1 + 3, 9.
